

Product Overview

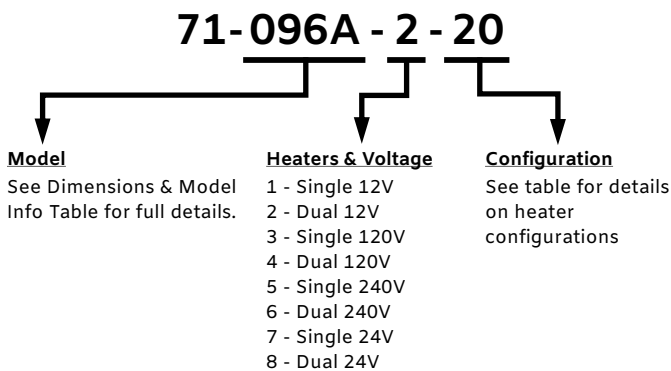

Heated Enclosure Packages are designed to fit around your high-pressure regulators such as the Fisher 1301, Belgas P39, APT KT 12 MECO, and others. A stainless-steel enclosure positions one or two catalytic heaters adjacent to the equipment to prevent hydrate formation and other freeze ups.

1. The stainless-steel enclosure serves three functions: it mounts to the pipe and around the regulator, it protects the heater face from the weather, and directs the infrared heat toward the regulator.
2. Heated Enclosure Packages can be configured with one or two catalytic heaters. The single-heater configuration is used for light- and medium-duty applications while the dual-heater unit prevents freezing in heavy duty applications and the harshest conditions.
3. Electricity is only needed during startup -- usually only about 15 minutes. Units can be configured for a variety of starting voltages. Heated Enclosure Packages include appropriate starting cables. On dual-enclosure units, an electrical jumper connects the heaters, so a single electrical supply preheats both units.
4. On dual-heater units, the heater fuel supply is managed with the fuel gas manifold. It includes a low-pressure regulator and provides fuel to both heaters from a single input.

Overview

Heater Configurations

Heated Enclosure Packages are available with heaters of the following configurations:

Config	Hazardous Location Listing		Junction Box		Valve and Thermo-couple
	Class I Div 1 Group D	Class I Div 2 Group D	Plain	EP	
-10			•		
-20				•	
-30		•	•		•
-40	•	•		•	•
-50	•	•		•	•
